PROFILE

I'm a Computer Science student and Full-Stack Web Developer interested in building practical web applications. I mainly work with React, Node.js, Express, PostgreSQL, and MongoDB. I've built projects such as an e-learning platform and a note-taking application, where I worked on both the frontend and backend, including authentication, database design, APIs, and application features. I'm currently focused on improving my software architecture, security, and overall development skills.

EXPERIENCE & PROJECTS

Full-Stack E-Learning Platform

Mar 2026 - Present

- Created an online learning platform where users can find courses, enroll, learn through lessons and quizzes, track progress, and review courses.
- Built the PostgreSQL database and backend to support the course structure, user enrollment, learning progress, reviews, and subscriptions.
- Created an admin dashboard for managing courses, users, instructors, subscriptions, and the content inside each course.
- Connected the platform with Stripe for payments and Cloudinary for media uploads while using session-based authentication to manage user access.

Full-Stack Note-Taking Application

May 2026 - Present

- Created a note-taking application with a rich-text editor, notebooks, tags, search, favorites, archive, and trash features.
- Built an autosave feature that automatically saves notes, retries failed requests, and handles changes when users leave or return to the page.
- Organized the backend into controllers, services, middleware, and database models to separate responsibilities across the application.
- Added authentication, password reset, secure cookies, input validation, rate limiting, and protection against common web security issues.

EDUCATION

Bachelor of Computer Science

Jan 2024 - Jun 2027

Western University | Major in Computer Science

SKILLS

- Languages: JavaScript, SQL, HTML, CSS
- Frontend: React, React Router, TanStack Query, Zustand, Tailwind CSS
- Backend: Node.js, Express.js, REST APIs
- Databases: PostgreSQL, MongoDB
- Tools & Services: Git, GitHub
